

**MULTI-PURPOSE HOLDER HAVING A POST**

**BY**

**DAE SUNG KIM & KIL HEE KO KIM**

5

**BACKGROUND OF THE INVENTION**

This invention relates to a multi-purpose holder. More specifically, the present invention relates to an improved multi-purpose holder having a central post to hold stationery articles and to prop decoration articles on top of the post.

A pencil case or a pencil holder is most used for keeping stationery items. Various pencil holders are in use for holding and keeping those items. However, such conventional pencil holders are inevitably exposed to tangling among pencils and pens inserted therein.

An increased demand is to ideally overcome such a tangling in the pencil holder and further satisfy a user's need. Another demand on the market is to enable the pencil holder to also prop decoration articles on top of the post. For example, those who love golf want to place a golf ball nearby for accessibility.

A further demand is to enable a pencil holder to include an article to facilitate holding and moving of the

holder, preferably in form of a post that axially stands inside the holder.

#### SUMMARY OF THE INVENTION

The present invention is contrived to overcome the  
5 conventional disadvantages. Accordingly, it is an object of  
a multi-purpose holder having a post according to the  
present invention to provide an improved multi-purpose  
holder having a central post to hold stationery articles  
and to simultaneously prop decoration articles on top of  
10 the post. Another object is to prevent tangling of  
pencils, pens and toothbrushes inserted therein.

To achieve these and other objects, the multi-purpose  
holder having a post according to the present invention  
comprises a container having a base and a peripheral wall.  
15 The base has an outer circumference, and the peripheral  
wall upwardly extends from about the outer circumference of  
the base for at least two inches in height.

A post having a mid portion, a top end and a bottom  
end is provided to have its bottom end attached to the base  
20 so as to enable the mid portion of the post to prevent pens,  
pencils and other items inserted into the container from  
tangling with each other. The top end may hold a decoration  
article thereon. Selectively, the bottom end may be  
detachably attached to the base.

In an embodiment, a plurality of protrusions radially extend from the peripheral wall toward the post to further prevent tangling of said pens, pencils, and other items. It is also preferred that the post is between about 1.0 inch  
5 and about 2.5 inches in diameter. The post is detachably attached to the base, cylindrical in shape, and taller than the peripheral wall. Also, the protrusions are formed along an upper rim of the peripheral wall, each semi-conic in shape to upwardly grow from the outer circumference of the  
10 base, each semi-circular in shape when viewed atop, or each substantially circular in shape when viewed atop.

An advantage of the multi-purpose holder having a post according to the present invention is prevention of tangling of pencils and pens inserted therein by providing  
15 a post and protrusions along an inner periphery thereof. Another advantage is to allow the user to utilize the post as either a decoration object or a decoration tool allowing, for example, a golf ball to stay on top of the post, thereby satisfying a user's aesthetic desire associated  
20 with personal activities. In addition, the multi-purpose holder enables the post to serve as a handle that facilitates holding and moving of the holder, thereby maximizing usability and product reliability.

Although the present invention is briefly summarized, the fuller understanding of the invention can be obtained by the following drawings, detailed description and appended claims.

5

#### **BRIEF DESCRIPTION OF THE DRAWINGS**

These and other features, aspects and advantages of the present invention will become better understood with reference to the accompanying drawings, wherein:

10        FIG. 1 is a perspective view illustrating a multi-purpose holder according to the present invention;

FIG. 2 is a top plan view of the multi-purpose holder according to the present invention; and

15        FIG. 3 is another top plan view showing a preferred embodiment of the present invention.

#### **DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENTS**

As shown in Fig. 1, the multi-purpose holder 10 according to the present invention comprises a container 12 and a post 14. The container 12 has a base 16 and a peripheral wall 18. The base 16 has an outer circumference 20. On or near the outer circumference 20, the peripheral wall 18 extends upwardly. The container 12 can be shaped in cylindrical, polyhedral, or other known forms depending

upon a user's need. Also, the peripheral wall **18** is preferred to have at least two inches in height. Here, the post **14** may be formed taller than the peripheral wall **18**. In a preferred version, the post **14** serves as a decoration  
5 article, for example, shaped after an animal or a cartoon character.

The post **14** has a mid portion **22**, a top end **24** and a bottom end **26**. The bottom end **26** is attached to the base **16** but the mid portion **22** is not directly attached to the  
10 peripheral wall **18**. In a preferred version, the bottom end **26** may be detachably attached to the base **16** using, for example, a set of bolt and nut. The middle portion **22** of the post **14** serves to separate pens **13**, pencils, toothbrushes and other stationery items inserted into the  
15 container **12**, thereby being useful in preventing tangling of said pens, pencils, toothbrushes and other stationery items. Further, the post **14** may serve as a handle to facilitate holding and moving of the holder **10**.

The bottom end **26** of the post **14** is attached to the  
20 base **16** so as to enable the mid portion **22** of the post **14** to prevent pens, pencils and other items inserted into the container **12** from tangling with each other, whereas the top end **24** of the post **14** is formed to hold a decoration article, such as a golf ball **15**, a table tennis ball, a

base ball or other decoration items depending on the user's preference.

In this construction, a plurality of protrusions **28** are provided to radially extend from the peripheral wall **18** toward the post **14** to further prevent tangling of the pens, pencils, and other items. The post **14** is preferably formed between about 1.0 inch and about 2.5 inches in diameter. In a preferred version, the post **14** is cylindrical in shape. To optimize a tangling prevention, it is recommended that the protrusions **28** are formed along an upper rim **30** of the peripheral wall **16**.

For a better performance, the protrusions **30** are each semi-conic in shape to upwardly grow from the outer circumference of the base **16**. Selectively, the protrusions **28** are each semi-circular in shape when viewed atop, or substantially circular in shape when viewed atop.

As discussed above, advantages of the multi-purpose holder **10** according to the present invention are numerous. An advantage is to substantially prevent tangling of pencils and pens inserted therein in the container **12** by providing the protrusions **28** and the post **14**, thereby improving product reliability.

Another advantage of the present invention is to satisfy a user's aesthetic and decorative desire by

allowing the user to utilize the post as either a  
decoration object or a decoration tool. As an example, a  
decoration statue or ball can be mounted on the top end **24**  
to enhance the look and feel. In addition, the multi-  
5 purpose holder **10** enables the post **14** to serve as a handle  
that facilitates holding and moving of the holder **10**,  
thereby maximizing usability and product reliability.

Although the present invention has been described in  
considerable detail with reference to certain preferred  
10 versions thereof, other versions are possible by converting  
the aforementioned construction. Therefore, the scope of  
the invention shall not be limited by the specification  
specified above and the appended claims.
